As pharmacies continue to grow in capacity and complexity, their storage needs continue to grow and evolve as well.

RxStor transforms traditional stationary shelf Pharmacies into highly efficient and organized entities by compacting stored items into the smallest possible area

Benefits include:

- Patented slides allow for easy in-and-out movement of shelf units
- Condenses stored items into the smallest possible area
- Reclaims unused floor space by eliminating empty aisles.
- Increases storage capacity
- Improves efficiency

RxStor 's unique shelf units store the fastest moving meds on open shelves on the front of the system. Slower moving meds or bulk items are stored behind the "quick-pick" shelf fronts and are accessed by extending the units.

RxStor also improves a Pharmacies efficiency by decreasing the distance between the work area and stored meds.

Benefits Include:

- Quick access to fast moving meds
- Shorter walk equals faster retrieval
- More meds stored closer to work areas
- More scripts filled in less time
- Reduced fatigue

Pictured: four double entry RxStor units with two partially open

RxStor fully closed

- most compact high density storage system on the market
- Multiple carriage and shelf sizes allow RxStor to fit in all most any space

RxStor partially open

- Stored items are accessed by sliding the shelf into the egress aisle
- Multiple units can be accessed simultaneously

RxStor fully open

- Quick and complete access to stored items
- Soft open and close feature keeps items from moving during operation
