

Garment Storage Made Easy

Shown above is the LiftNStore® Overhead Quad Garment Lift, model LG-1033.
The footprint is 24 feet long and features 96 feet of open hang bar space.

Why does overhead storage make sense?

1. Garment storage gets awkward in tight spaces.
2. Things easily go missing in confused storage.
3. Time is lost searching for inventory.
4. Dropped clothing gets dirty and damaged.
5. No more rolling ladders or climbing.
6. You are paying for open air every month, now that empty space can become a valuable asset by converting it to high density storage.
7. Your regular shelving stays right where it is.

How does it work?

1. The overhead lift mounts into your ceiling so there is no need for a remodel. You don't even have to move your existing shelving.
2. Push the button and your garments come right down to your finger tips.
3. Garments are at the perfect height for easy loading and unloading.
4. Inventory is easy to manage because everything is right there.
5. Push the button and up they go.
6. When the lift is up you can relax knowing your garments are safe and secure because no one can tamper with them.
7. Your aisles stay open and clear.

- All LiftNStore® Lifts do the same thing, they go up and down. They are simple, reliable and strong.
- You have many different styles of lift to choose from, there is one that matches your area perfectly.
- Because the overhead lift is an 'electric appliance' not a 'building improvement', you will enjoy a nice tax break
- Every LiftNStore® Lift is made with pride in the United States of America.
- With more than 3,300 successful installations over the last 20 years, LiftNStore® Overhead Lifts have become the gold standard and we stand behind our lifts.
- Your satisfaction is guaranteed.
