Military Storage Solutions

Today's armed forces are always being challenged with being prepared to protect and defend our country. Designing and planning efficient military facilities reduces construction costs and operating expenses while enhancing the security and productivity of our armed forces, allowing them to be ready to serve and protect.

Southwest Solutions Group® designs and installs all types of solutions on GSA Schedule Contracts that maximize the use of building floor space and improve productivity and security for optimum deployment readiness.

High Capacity Bulk Racks

Maximize the storage of bulky military gear and equipment in less space with high capacity racks. Racks are designed to ensure quick access and promote security of stored items.

Automated Storage Systems

Automated storage systems utilize valuable overhead space while optimizing picking productivity & inventory control. Reduce lost items and surplus inventory while improving retrieval times.

Readiness Gear Cabinets

Store combat & deployment readiness gear efficiently in high security cabinets so they can be retrieved quickly at a moment's notice.

Parachute Storage Racks

Save space and store parachutes more efficiently with adjustable racks that improve accessibility and allow soldiers to quickly find and retrieve what they need.

Manufactured Cabinets

Manufactured cabinets ship assembled and ready to set in place, making installation and relocation simple. Cabinets install quickly and eliminate dealing with subcontractors, fumes, and dust.

Weapons & Optics Storage

Heavy-duty, secure armory weapons racks provide secure and durable storage for guns, ammo, optics, radios, and other critical military gear.

Compact Pallet Racks

Stationary aisles take up as much as 60% of warehouse floor space. Convert that wasted space into more pallet storage positions without sacrificing access.

Powered Filing Cabinets

Reclaim up to 60% of your floor space and increase productivity up to 56%. This ADA compliant system can store & secure files, binders, parts, & supplies.

High-Density Shelving

Reduce floor space by eliminating wasted unused aisle space. Free up floor space for more important operations or double your storage capacity in the same footprint.

Mezzanines

Add valuable space to your facility with a mezzanine system. Strong enough to hold the heaviest loads and flexible enough to relocate when needed.

Wire Security Partitions

Wire partitions and cages can be configured to meet your exact requirements and are ideal for secure, visible, and ventilated protection for weapons, gear, equipment, and more.
